Silverstripe sites need an urgent patch for two serious flaws

Published 25 November 2026. Read the full story, sources and any updates at
digitaladvisors.com.au/journal/silverstripe-cms-critical-patches-november-2026/

- [ ] **Find out if your site runs Silverstripe.** Ask your web developer or agency which content management system the site is built on.
- [ ] **Ask for the framework update today.** Request silverstripe/framework 6.3.10, 5.4.31 or 4.13.45, or the fixed release for your exact minor version.
- [ ] **Update the template engine on Silverstripe 6.** Make sure silverstripe/template-engine is at version 1.0.3 as well.
- [ ] **Get written confirmation of the version.** Ask your developer to confirm in writing which framework version the live site runs after the update.
- [ ] **Check for accounts with no password.** Have your developer list CMS accounts, including the default admin and any made by single sign-on, and remove or secure those without a password.
- [ ] **Lock down the admin pages.** Ask whether /admin and /Security can be limited to your office or your developer's addresses.
- [ ] **Plan an upgrade if you're on Silverstripe 4 or 5.0 to 5.3.** Patches for versions before 5.4 are best-effort, so ask for a quote to move to a newer version.
