Zimbra email attacks make a July patch an urgent provider question

Published 1 October 2026. Read the full story, sources and any updates at digitaladvisors.com.au/journal/zimbra-email-active-attacks-cve-2026-73570/

-
- ☐ **Identify your email platform today.** Ask your hosting or IT provider whether your business email runs on Zimbra.
 - ☐ **Get the version and configuration in writing.** Have the Zimbra administrator confirm the running version, optional zimbra-snmp package and SNMP-notification settings.
 - ☐ **Confirm the upgrade immediately.** Ask the provider to install Zimbra 10.1.20 or later on affected servers and record completion.
 - ☐ **Agree temporary containment if patching must wait.** Have the provider apply Microsoft's mitigations and explain any mail-delivery impact.
 - ☐ **Request a compromise investigation.** Have the provider report its checks, authentication-secret rotation and any required containment or recovery.
